INTRODUCTION

The development of a system of bibliographic control to facilitate selection of pertinent information when needed has been a challenge for many years. The task has become increasingly difficult in medicine as the volume of literature published has increased tremendously. In 1879 Dr. John Shaw Billings, first editor of the *Index Medicus*, noted that there were approximately 850 medical periodicals published each year with an average of 20,000 substantial articles. In 1959 Seymour Taine, present editor of the *Index Medicus*, reported that a survey of the National Library of Medicine indicated 5,000 "substantive" medical periodicals published in the world with a potential of 220,000 aritcles on medicine, broadly defined.

The magnitude of the literature is but one of the problems; language, form, and difficulties in acquiring the materials are others. There had been, until recently, no significant changes in production methods; manipulation of over a million cards each year had reached the limits of capacity of a manual system. The 1960 *Index Medicus* represents the product of a succession of concerted endeavors to provide an essential tool for medical research, utilizing mechanical composition techniques.

Index Medicus—1879-1926

In 1879 the Library of the Surgeon-General's Office (National Library of Medicine) began publication of a monthly index to medical periodical literature of the world under the title *Index Medicus*. "All current medical journals and transactions of value, so far as they can be obtained" by the Library were indexed under broad subject classifications. The *Index* was issued in three series covering the years 1879 to 1926. This valuable work was beset with increasing financial difficulties and, in 1927, was combined with the *Quarterly Cumulative Index*.

Quarterly Cumulative Index Medicus—1916-1956

The American Medical Association began publication of the *Quarterly Cumulative Index* in 1916 from titles listed in the Current Medical Literature Section of the *Journal of the American Medical Association*. This index did not attempt to be inclusive; the final volume of 1926 covered the contents of only 326 periodicals. The attractive feature of the *Quarterly Cumulative Index* was its format: authors and subjects were arranged in alphabetic sequence utilizing a complex of *see* and *see also* references.

The *Index Medicus* and the *Quarterly Cumulative Index* were published concurrently until 1927 when they were combined to form the *Quarterly Cumulative Index Medicus (QCIM)*. At first, the *QCIM* was jointly sponsored by the National Library of Medicine and the American Medical Association. Editorial duties were divided; for a number of journals cards were sent from Washington to be checked and filed in Chicago where the *Index* was printed at AMA headquarters. This arrangement continued until 1932 when the American Medical Association assumed full responsibility for the *Quarterly Cumulative Index Medicus*.

Although greatly expanded, the *QCIM* continued to follow a policy of selectivity. "It does not seem advisable," the Editor stated in his annual report of 1929, "to attempt an absolute and complete index of all articles included in all periodicals ..." Thus, the *QCIM* was oriented toward the practicing physician—it concentrated on clinical subjects and was highly selective of research communications. The 1927 issue covered the contents of 1,165 periodicals.

Current List of Medical Literature—1941-1959

In 1941 the National Library of Medicine began publication of the *Current List of Medical Literature*, "a weekly list of the contents of some of the more useful medical journals" received in the Library. During the War the *QCIM* began to fall behind because of inability to obtain foreign journals, personnel shortages, and a series of printing strikes. Consequently, the *Current List* began to fill the need for a more current guide to the medical literature. In July-December 1950 the format of the *Current List* was completely revised and the first cumulation was published. Each issue was divided into three parts: the Register of Articles which listed the table of contents of each journal, the Subject Index, and the Author Index.

Thus, history was repeating itself. The *Current List* and the *QCIM* were published concurrently until 1959. The *QCIM* selectively covered 905 periodicals and indexed about 60,000 articles annually; the *Current List* covered about 110,000 articles. Duplication between the two periodicals occurred, but together they were deficient in listing the total substantive medical literature. It was thus reasonable that the two organizations should turn toward cooperation in a new publishing venture.

Index Medicus—New Series, 1960

In 1957 the National Library of Medicine presented, and its Board of Regents approved, a plan for a survey of its in-

dexing operations incorporating the development of a mechanized system of composition. In April 1958 a grant of $73,800 was received from the Council on Library Resources to carry through this plan. Early in 1959 the American Medical Association was invited to amalgamate the *Quarterly Cumulative Index Medicus* with the *Current List of Medical Literature* and to publish jointly the new *Index Medicus*. This proposal was approved by the Board of Trustees of the American Medical Association in June 1959.

The *Quarterly Cumulative Index Medicus* ceased publication with Volume 60, July-December 1956. The medical literature of 1957-1959 was covered by the *Current List of Medical Literature*. Beginning January 1960, both publications were superseded by the monthly *Index Medicus*, published by the National Library of Medicine, and the *Cumulated Index Medicus*, published annually by the American Medical Association.

The new *Index Medicus* represents significant advances in the production of a published index. Dr. Billings and Dr. Fletcher, in the early days of the old *Index Medicus* and *Index-Catalogue*, personally selected articles whose bibliographic information was transcribed on cards by hand. Subject headings were penciled on the cards by the Editor and his assistant, then filed by hand and sent to the printers for typesetting. This manual manipulation of cards in the production of the index remained unchanged until recent times: both the *Current List of Medical Literature* and the *Quarterly Cumulative Index Medicus* utilized basically the same methods until their cessation in 1959.

The system developed by the National Library of Medicine for the *Index Medicus* involves three main elements: (1) typewriters which operate from punched tape, enabling typing of entries on IBM cards; (2) IBM sorters and collators for filing entries in alphabetic sequence; (3) the Eastman-Kodak Listomatic camera which is capable of photographing text imprinted along the top edge of an IBM card at the rate of 230 cards per minute.

Inherent in any machine system are mechanical difficulties which require painstaking adjustment. Spacing of the lines is but one example where preciseness of a high order is required. Here, as in many areas, continuing attempts are being made to achieve satisfactory operation.

Format

The *Index Medicus* in its new format has been warmly received by the library and medical community. The *Cumulative Index Medicus* is a merging into one alphabet of the material which appeared in the twelve monthly issues of the *Index Medicus* (125,000 articles in 1960); the format remains the same. The *Cumulated Index Medicus* is arranged in two sections, Subject and Author. Complete unit citation entries are printed within each section. In the Author Section, however, the unit citation appears only under the senior or single author with all secondary authors' names referring to the full reference under the senior author. The complete entry normally includes the names of all authors cited in the Journal; the title of the article, either in the original English or in translation (enclosed within brackets); the journal title abbreviation; the volume number; inclusive pagination; date of issue, and an abbreviation denoting the original language of the article if other than English. A list of the foreign language abbreviations follows:

Af	Afrikaans	It	Italian
Ar	Arabic	Jap	Japanese
Bul	Bulgarian	Nor	Norwegian
Ch	Chinese	Pol	Polish
Cz	Czech	Por	Portuguese
Dan	Danish	Rum	Rumanian
Dut	Dutch	Rus	Russian
Fin	Finnish	Ser	Serbo-Croatian
Fr	French	Sl	Slovene
Ger	German	Sp	Spanish
Gr	Greek	Sw	Swedish
Heb	Hebrew	Th	Thai
Hun	Hungarian	Tur	Turkish
Ic	Icelandic	Uk	Ukranian
In	Indonesian	Viet	Vietnamese

Under each appropriate subject heading and subheading, the complete entry is arranged in approximate alphabetical order merely by the first letter of the senior author's surname. The entry (without heading and subheading) appears exactly the same way in the Author Section, located in strict alphabetic order according to its senior author's name. The typical junior author cross reference appears as follows:

Gaudier B see BRETON A

Articles about an individual are listed in the Subject Section under the headings BIOGRAPHIES, OBITUARIES, and FAMOUS PERSONS. Entries are listed under the headings BIOGRAPHIES and OBITUARIES alphabetically by the subject of the article rather than by the author.

Journal title abbreviations are derived (with minor deviations) from the *World List of Scientific Periodicals* and *World Medical Periodicals*. Capital letters only, however, are used

at the beginning of every member of the abbreviation; punctuation is also eliminated. A complete key to the journal title abbreviations used in the *Cumulated Index Medicus* is provided in the following pages. Two complete listings of journal titles and abbreviations are in fact provided—one arranged alphabetically by the abbreviation, the other by the full journal title.

Subject Headings

The entries in the Subject Section are arranged under subject headings representing the main concepts of medicine and its ancillary fields. The strictly controlled system of headings, along with cross references used, has been separately published by the National Library of Medicine under the title *Medical Subject Headings* (1960), and is available from the U. S. Government Printing Office, Washington 25, D. C., at $2.25 per copy.

* * * *

Credit is due to the officers of the American Medical Association and the staff of the National Library of Medicine, particularly Dr. Frank B. Rogers, Director, and Seymour Taine, Chief of the NLM Index Division. The tribute of Dr. Fielding H. Garrison to the *Quarterly Cumulative Index Medicus* of 1926 may well apply to the *Index Medicus* of 1960:

"... the culmination of an effort, long since contemplated ... as combining the best resources available and as employing the most labor-saving methods of medical indexing, the new Index deserves, therefore, the hearty and unqualified support of the entire medical profession all over the world. May we auspicate its future in the ancient invocation *quod felix, bonum faustumque sit.*"
